

ABSTRACT

In 1974, there were approximately 2.7 million persons 14 years of age and over who did farm wagework at some time during the year. The hired farm working force has changed little over the last 3 years. Thus, the annual employment of farmworkers appears to have become stable after the long-term downward trend of prior years.

Generally, hired farm wageworkers were young (median age 23 years), white (83 percent), male (79 percent), and resided in nonfarm places (76 percent). They earned an average of \$1,447 in annual cash wages, or \$16.60 per day for 87 days of farm wagework.

Approximately 1.6 million workers were employed solely in farm work during the year; the remaining 1.1 million performed both farm and nonfarm work.

About 209,000 (8 percent) of the total were migratory farmworkers in 1974, the third consecutive year of increase. Annual earnings for these workers averaged \$1,688, or \$21.60 per day for 78 days of farmwork. Forty-nine percent of all migrants were only employed in farmwork during the year.

Key words: Hired farmworkers, Farm labor, Casual workers, Noncasual workers, Migratory workers, Seasonal workers, Regular workers, Year-round workers, Nonfarm work, Wages, Employment, and Earnings.

ACKNOWLEDGEMENTS

This report is the latest in the annual Economic Research Service (ERS) series relating to persons who do work on farms for cash wages. Greg Russell and Dennis Klein of the Demographic Surveys Division, Bureau of the Census, cooperated in planning the survey and supervised field operations and the tabulation of data. The report was prepared under the general direction of Robert Coltrane, Leader, Manpower Studies Program Area, Economic Development Division, ERS.

THE HIRED FARM WORKING FORCE OF 1974

-- A Statistical Report --

by Gene A. Rowe, Agricultural Statistician, and
Leslie Whitener Smith, Sociologist
Economic Development Division
Economic Research Service

INTRODUCTION

This report provides information on the number of persons 14 years of age and over who performed hired farm wagework at any time during 1974. Data are presented on the number, characteristics, employment, and earnings of these persons. The brief analysis highlights some of the most pertinent changes and trends in the size and composition of the hired farm working force.

Data were obtained through an annual survey conducted for ERS by the Bureau of the Census as a supplementary part of its monthly Current Population Survey (CPS) made in December 1974. The information in this report is based on sample data and is subject to sampling errors. The sampling error is the probable difference that may exist between results in this report and results based on a complete census using the same schedules, instructions, and interviewers. The survey coverage and sampling errors are discussed in appendix A. Definitions or explanations of terms used in this report are given in appendix B.

HIRED FARM WORKING FORCE REMAINS STABLE

In 1974, there were 2.7 million persons 14 years old and over in the Nation who performed farm wagework at some time during the year (table 1). The size of the hired farm working force has changed only slightly over the last 3 consecutive years, averaging 2.74 million persons. This compares with the previous 3-year period (1969, 1970, and 1971), when the hired farm working force averaged 2.5 million (table 2). Thus, annual employment of farm wageworkers appears to have become stable after the long-term downward trend of prior years.

At the same time, there was a significantly greater annual production of agricultural commodities. During 1971 through 1974, the index of annual farm output ran at record high levels, ranging from 110 to 112 percent of the 1967 base-year production. The largest annual change in recent years came between 1970 and 1971, when the index increased from 101 to 111 percent. ^{1/}

Among the major agricultural commodities, production between 1973 and 1974 increased for beef cattle, food grains, vegetables, and tobacco. Decreases were recorded for feed grains, hay and forage crops, sugar crops, fruits and nuts, cotton, and oil crops. Associated with these changes were increases in the number of farm wageworkers in the Northeast and the South, and decreases in the North Central and Western regions.

THREE-YEAR AVERAGES SHOW SIGNIFICANT TRENDS

The hired farm working force over the past 3 years has shown significant increases in number of persons performing 75 or more days of farmwork during the year. Comparing averages for 1969-71 and 1972-74 (shown in tables 2 and 3), in the latter 3-year period:

^{1/} Changes in Farm Production and Efficiency--A Survey Report. Economic Research Service. (In process).

- There were about 2.7 percent fewer workers doing less than 75 days of work.
- Number of workers doing between 75 and 249 days of hired farmwork increased about 36.8 percent, while workers who did 250 or more days of work increased by about 29.6 percent.
- Man-days for year-round workers increased 25.3 percent; the man-days of regular workers increased by 42.1 percent. The average number of man-days for those workers who did from 75 to 149 days of farmwork increased 33.3 percent.
- Man-days of workers who did less than 75 days of farm wagework (64 percent of the average 1972-74 hired farm working force) decreased 5 percent. So did their proportionate share of the total man-days.

SLIGHT CHANGES OCCUR IN HIRED FARM WORKING FORCE COMPOSITION AND RESIDENCE

In 1974, compared with 1973, more of the hired farm working force were Negro and other races, younger, and living in nonfarm residences (tables 4, 5, and 6):

- 76 percent lived in nonfarm places, compared to 75 percent in 1973.
- 32 percent were young people 14-17 years of age; 76 percent of them were male. In 1973, these proportions were 30 and 80 percent, respectively.
- the median age was 23 years, compared with 24 years for 1973.
- 17 percent were Negro and other races, up from 14 percent in the previous year.
- 79 percent were males, the same as a year earlier.
- 38 percent lived in the South, 10 percent in the Northeastern States, 26 percent in the North Central States, and 26 percent in the West. Compared with 1973, these proportions represented 2-percent increases in the South and Northeast, and 2-percent decreases in the West and the North Central regions.

Figure 1 shows the large changes in place of residence that occurred between 1973-74 and the late forties.

MAN-DAYS OF FARM WAGEWORK DECREASE

Man-days of farm wagework in 1974 totaled 239 million--6 percent less than the 254 million man-days performed in 1973 (table 5).

- The year-round and regular workers (23 percent of the 1974 hired farm working force) did 70 percent of all farm wagework performed on farms. This was 2 percent less than they accounted for in 1973 (fig. 2).
- Total man-days of work performed by whites and Negro and other races was proportionate to their distribution in the hired farm working force.

AVERAGE EARNINGS INCREASE; AVERAGE DAYS WORKED DECLINE

During 1974, hired farmworkers earned an average \$16.60 a day in cash wages from their farm wagework (table 7). As a group, their annual earnings were \$1,447 for 87 days of work. (All earnings reported refer only to cash wages, excluding the value of perquisites or fringe benefits furnished by employers.)

Figure 1.

Figure 2

Daily earnings in 1974 from farm wagework increased over 1973 in all regions, while the average days of farmwork decreased. Annual earnings from farm wagework rose in all regions except the Northeast, as increases in daily earnings more than offset the decline in days worked. The increases in daily earnings were the largest in the North Central and Southern States. The decrease in average days worked was largest in the South.

The hired farm working force, when classified by length of time worked, race and chief activity shows large variations in workers' average days of farmwork, and daily and yearly earnings (tables 8, 9, and 10):

- The casual worker earned \$125 yearly for 9 days of farm wagework, an average \$13.60 per day.
- The regular worker earned \$3,534 annually for 199 days of farm wagework, an average \$17.70 a day.
- The year-round worker earned \$5,274 annually for 307 days of farm wagework, an average \$17.15 a day.
- The white worker averaged 86 days of farmwork and \$1,461 annually, or \$16.95 per day.
- Workers who were Negro or other races averaged 93 days of farmwork and \$1,377 annually, or \$14.90 per day.
- When the workers' chief activity during the year was farmwork, days of farmwork averaged 205 days and earnings \$3,680 for the year (\$18.00 per day).
- Farmworkers whose chief activity was keeping house averaged 36 days of farmwork and \$457 in annual earnings (\$12.65 per day); those farmworkers in school most of the year averaged 40 days and \$491 for the year (\$12.40 per day).

In 1974, 1.6 million noncasual workers averaged 145 days and earned \$2,433. Chief activity for these workers varied greatly during the year. Figure 3 shows that along with the upward trend in farm worker employment in the early 1970's, there has been an increasing proportion of workers whose chief activity during the year is farm wagework. This compares with a decreasing proportion indicating they were not in the labor force during most of the year. Proportions performing "other farmwork", "nonfarm work" and "unemployed" were for the most part unchanged.

Figure 3

PROPORTION OF FARM WAGEWORKERS DOING ONLY FARM WAGEWORK OR BOTH FARM AND NONFARM WAGEWORK UNCHANGED

In 1974, there were 1.6 million persons whose only employment during the year was farm wagework (table 11). Although this is a slight (39,000) increase from a year earlier, their proportion of the total hired farm working force did not change.

-- Persons performing farm wagework only during the year were employed an average 114 days and earned \$1,928 or \$16.80 a day.

The number of persons who performed both farm and nonfarm wagework in 1974 was 1.1 million (table 12). This number was also up slightly (28,000) from the year before, although their proportion of the total hired farm work force remained about the same as in 1973.

-- Persons performing both farm and nonfarm wagework during the year were employed an average 48 days in farm wagework and earned \$769 from this employment, or \$15.85 a day.

-- 86 percent of those persons performing both kinds of work lived in a nonfarm residence, whereas, only 69 percent of those performing only farm wagework lived in a nonfarm residence.

NUMBER OF MIGRATORY WORKERS INCREASES

There were 209,000 persons performing migratory farm wagework in 1974, a slight increase over the 203,000 of the previous year. This marked the third consecutive year of increase since 1971, when 172,000 migrant workers were recorded:

- Migratory workers accounted for 8 percent of all farm wageworkers and 6 percent of the man-days worked.
- 31 percent of migrants were 14 to 17 years old.
- 62 percent of migrant workers did less than 75 days of farm wagework during the year, 17 percent worked on farms from 75-150 days and 21 percent performed 150 days or more of farmwork.
- 92 percent of migrants are white.
- The South and West each contained about one-third of the migratory workers.
- For 49 percent of these migratory workers, farmwork was their only employment during the year.
- Migrants as a group performed an average of 78 days of farm wagework in 1974 and earned \$1,688 (\$21.60 per day); nonmigratory workers worked an average of 88 days on farms and earned \$1,427 (\$16.25 per day).

APPENDIX A

SOURCE AND RELIABILITY OF ESTIMATES

Source of data.--The estimates in this report were based on data obtained in December 1974 through supplementary questions in the Current Population Survey of the Bureau of the Census. The sample was spread over 461 areas comprising 923 counties and independent cities, with coverage in each of the 50 States and the District of Columbia. Approximately 47,000 occupied households were designated for interview each month. Of this number, 2,000 occupied units, on the average, were visited but interviews were not obtained because the occupants were not found at home after repeated calls or were unavailable for some other reason. In addition to the 47,000 there were also about 8,000 sample units visited in an average month, but which were found to be vacant or otherwise not to be interviewed.

The estimates in this report concern persons 14 years of age or older who did farm wagework in 1974. These data were compiled from supplementary questions to the Current Population Survey asked of persons 14 years of age or older who performed farmwork for wages or salary during 1974. These questions concerned number of days of farm wagework, farm wages, migratory status, nonfarm wagework and nonfarm wages, chief activity in 1974, residence, and other matters. Not included in this report were persons performing hired farm labor during 1974 but who died, entered the Armed Forces, or were no longer in the civilian noninstitutional population for other reasons prior to the field collection. Also not included were foreign nationals who did farm wagework in this country and returned to their homes before the field collection. The number of foreign nationals admitted declined sharply after the termination of Public Law 78 in December 1964, and in 1974 totaled only 12,049. 1/

The estimating procedure used in this survey involved the inflation of the weighted sample results to give independent estimates of the civilian noninstitutional population of the United States by age, race and sex. These independent estimates were based on statistics from the 1970 Census of Population; statistics of births, deaths, immigration, and emigration; and the Armed Forces.

Reliability of the estimates.--Since estimates were based on a sample, they may differ somewhat from figures obtained if a complete census had been taken using the same schedules, instructions, and enumerators. As in any survey work, the results are subject to errors of response and reporting, as well as being subject to sampling variability.

The standard error is primarily a measure of sampling variability. That is, variations occurring by chance because a sample rather than all the population is surveyed. As calculated for this report, the standard error also partially measures the effect of response and enumeration errors but does not measure any systematic biases in the data. The chances are about 68 out of 100 that an estimate from the sample would differ from a complete census figure by less than the standard error. The chances are about 95 out of 100 that the difference would be less than twice the standard error.

The figures presented in appendix tables 1-5 are approximations to the standard errors of various estimates shown in this report. In order to derive standard errors that would be applicable to a wide variety of items and could be prepared at a moderate cost, a number of approximations were required. As a result, the tables of standard errors provide an indication of the order of magnitude of the standard errors, rather than a precise standard error for any specific item.

1/ Unpublished information from Manpower Administration, U.S. Dept. of Labor.

Appendix table 1--Standard errors for estimated
numbers of farm wageworkers

(68 chances out of 100)	
Size of estimate	Standard error
25,000	9,000
50,000	12,000
100,000	18,000
250,000	29,000
500,000	43,000
1,000,000	65,000
2,500,000	121,000
3,000,000	139,000

Estimated percentages and estimated averages are computed by using sample data for both numerator and denominator. The reliability of these estimates depends on the size of both the estimate and size of the totals upon which estimates are based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. Appendix table 2 contains the standard errors of estimated percentages. Averages are subject to large sampling variability, since the sample estimate of an average is affected by extreme estimates. If sensitive indicators are needed, other types of statistics, such as medians, should be considered. Appendix tables 3, 4, and 5 contain the standard errors of estimated averages.

Appendix table 2--Standard errors of percentage of farm wageworkers

(68 chances out of 100)

Appendix table 5--Standard errors of average daily earnings from farm wagework

(68 chances out of 100)

Average earnings from farm wage- work per day per person	Base of average in thousands of farm wageworkers						
	50	100	250	500	1,000	2,500	3,000
\$ 5.00	.60	.42	.27	.19	.14	.09	.08
7.00	1.13	.81	.51	.36	.26	.17	.15
9.00	1.46	1.04	.66	.50	.35	.23	.20
11.00	1.52	1.08	.68	.53	.43	.28	.25
13.00	1.54	1.09	.69	.55	.47	.31	.27
15.00	1.57	1.11	.71	.56	.50	.33	.29
17.00	1.59	1.13	.73	.57	.52	.34	.30
19.00	1.61	1.15	.75	.59	.53	.35	.31
21.00	1.62	1.16	.76	.60	.54	.36	.31

Illustration of the use of the tables of standard errors.--Table 4 of this report shows that 209,000 persons were migratory farm wageworkers. Appendix table 1 shows the standard error on an estimate of this size to be approximately 26,000. The chances are 68 out of 100 that the estimate would have shown a figure differing from a complete census by less than 26,000. The chances are 95 out of 100 that the estimate would have shown a figure differing from a complete census by less than 52,000.

Of these 209,000 migratory farm wageworkers, 67,000, or 32.1 percent, are from the Southern region. Appendix table 2 shows the standard error of 32.1 percent on a base of 209,000 to be approximately 6.0 percent. Consequently, chances are 68 out of 100 that the estimated 32.1 percent would be within 6.0 percent of a complete census figure, and chances are 95 out of 100 that the estimate would be within 12.0 percent of a census figure; that is, this 95 percent confidence interval would be from 20.1 to 44.1 percent.

Table 7 of this report shows that average annual earnings from farm wagework for migratory farm wageworkers are \$1,688. Appendix table 4 shows the standard error for that level of earnings, on a base of 209,000 workers, to be approximately \$148. Consequently, chances are 68 out of 100 that the estimated \$1,688 would be within \$148 of a complete census figure, and chances are 95 out of 100 that the estimate would be within \$296 of a census figure, i.e., this 95 percent confidence interval would be from \$1,392 to \$1,984.

APPENDIX B

DEFINITIONS AND EXPLANATIONS

Farm wageworkers.--Persons 14 years old and over in the civilian noninstitutional population of the United States at the time of the survey who did any farmwork for cash wages or salary at any time in the year, even if only for one day.

Farmwork for cash wages or salary.--(1) Work done on any farm for cash wages in connection with the production, harvesting, threshing, preparation for market, or delivery to market of agricultural products; (2) work done off the farm for a farmer by his hired farmworkers, such as trips to town to buy feed, seeds, or fertilizers, or to handle other matters involved in running the farm business; (3) repairs of farm buildings, machinery, etc., performed by a farm wageworker when done along with the type of work specified in (1) and (2) above; and (4) managing a farm enterprise for cash salary. Not included as farmwork for cash wages or salary are: (1) work performed by farm operators on their own farms, or "exchange" work between farmers; (2) work done exclusively for "pay in kind"; (3) work done without pay on a family farm by a member of the farm operator's family (a small regular cash allowance is not considered as farm wages); and (4) nonfarm work performed on a farm, such as the building of a farm structure, the drilling of a well, the hauling of agricultural products to market by commercial truckers, or domestic service in the home of a farmer; and (5) custom work such as spraying, threshing, combining, etc., when a person is paid a combined rate for the use of his equipment as well as labor.

Casual workers.--Persons who did less than 25 days of farm wagework.

Noncasual workers.--Persons who did 25 days or more of farm wagework. Noncasual workers include:

Seasonal workers.--Persons who did 25-149 days of farm wagework.

Regular workers.--Persons who did 150-249 days of farm wagework.

Year-round workers.--Persons who did 250 days or more of farm wagework.

(The use here of the terms "seasonal" and "regular" differs from that in the Census of Agriculture, where "seasonal workers" refers to persons employed on one farm for less than 150 days during the year, and "regular workers" to those employed on one farm for 150 days or more during the year.)

Age.--The age classification is based on the age of the person at his last birthday.

Race.--The term "race" refers to the division of the population into two groups--white or Negro and other races (including such groups as Indians, Japanese, and Chinese).

Chief activity.--Information on the chief activity of farm wageworkers during the year was derived from the question, "What was (respondent) doing most of 1974--working, keeping house, going to school, or something else?" If "working" was reported as the chief activity, the kind of work the persons was doing most of the year was determined. Farm wagework was reported if the person spent most of his working time doing farm wagework. Operating a farm was reported if a person spent most of his working time operating his own farm (as a tenant, owner, or sharecropper). Nonfarm work was reported if a person spent most of his working time in his own business or profession, worked without pay in a family business, or worked for pay (or pay in kind) in any nonfarm activity, such as manufacturing, trade, construction, domestic service, etc. If the

person did not report "working" as his chief activity, information was obtained on what he was doing most of the year. Looking for work (unemployed) was reported for a person who spent most of his time without employment, but was actively looking for a job. Keeping house was reported for persons who spent most of their time doing their own housework. Going to school was reported for persons who spent most of their time during the year going to school. The category "other" was reported for persons who spent most of their time at some activity other than those named above.

Residence.--Residence is determined on the basis of the classification of the place in which the worker lived at the time of the survey. In the Current Population Survey, farm wageworkers were classified as living on farms (farm residents) if they lived in rural territory on places of 10 or more acres of land, and if as much as \$50 worth of agricultural products were sold from the place in the reporting year. Also included are those who lived on places of less than 10 acres if as much as \$250 worth of agricultural products were sold from the place in the reporting year. Nonfarm-resident workers lived in urban places, rural towns or villages, or in the open country on places that did not meet the criteria for farm classification.

Migratory status.--Migratory workers are those who (1) left their homes temporarily overnight to do farm wagework in a different county within the same State or in a different State with expectation of eventually returning home, or (2) had no usual place of residence, and did farm wagework in two or more counties during the year. Nonmigratory workers are those (1) who did all their farm wagework for the year in the same county in which they lived, (2) who made a permanent move from one county to another during the year and performed farm wagework in both counties, or (3) who commuted daily across the county or State line to do farm wagework and returned home each night.

Region.--The States included in each of the four regions are as follows: Northeast--Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, Pennsylvania, and New Jersey; North Central--Ohio, Indiana, Illinois, Wisconsin, Michigan, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas; South--Maryland, Delaware, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, and Texas; and West--Montana, Wyoming, Idaho, Colorado, New Mexico, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, and Alaska.

Days of farm or nonfarm wagework.--Days on which any farm or nonfarm wagework was reported. The work may have been for all or only part of a day.

Earnings from farm or nonfarm work.--Total cash wages or salary received for farm-work or for nonfarm work. Estimates of earnings do not include the value of perquisites received in connection with farmwork nor the value of fringe benefits received in connection with nonfarm work.
